Library Databases: Find Articles, dissertations, tests and measurements

3. PsycArticles 1894-present. Full-text articles.
6. PubMed 1946-present Find Randomized Control Trials (RCT)

Library Catalog and ConnectNY – http://www.pace.edu/library/find-resources/library-catalog The Pace Library Catalog tells you what books Pace owns in all library locations and ConnectNY allows you to order books from several academic libraries in New York State.

Full Text Articles – Many of the Pace Library databases include the full-text of articles you need; however, when you are in a database and you do not see the link for full text, follow these steps: 1) copy the journal title (not the article title) and paste it into the library’s Journal Title Tab (go to the homepage and click on Journal Title tab button). See if it pops up in another database and if it does, search that one for the full-text.
2) Check Google Scholar: https://scholar.google.com/ by copying and pasting the article title and journal title into the search box. Look for PDF’s of the article. If you hit a paywall do not EVER pay for an article.

Articles in Google Scholar are NOT all peer-reviewed

Follow these steps to ascertain whether or not a journal is peer-reviewed.

1) Note the name of the journal from the citation.
2) Type the name "in quotes," into the regular version of Google in order to find that journal's homepage.
3) Go to the homepage and look for information "About" the journal.

Journals typically state the fact that they are "peer reviewed" (also known as "refereed" or "juried" or "blind reviewed." If, in the description, none of those words are used then you can be sure it is not "peer reviewed."
